

CHINA SILICON-BASED ANODE MATERIAL

Market Research Report

Author: Brendan Jephcott

Date: May 2024

Table of Contents

Executive Summary	2
1.0 Introduction.....	16
1.1 Rise of Silicon-Based Composite Anode Material.....	16
1.2 Electrode Manufacturing	19
2.0 Silicon-Based Anode Material	21
2.1 Characteristics of Silicon as an Anode Material	21
2.2 Characteristics of Silica as an Anode Material.....	21
2.3 Silicon-Based Anode Material Challenges.....	22
2.4 Silicon-Based Anode Material Products	23
3.0 Silicon-Based Anode Material Production Methods.....	26
3.1 Structural Design of Silicon-Based Anode Material Products.....	26
3.2 Silicon-Based Anode Material Production Methods	29
3.3 Si/C Anode Material Production Method	31
3.4 Nanosilicon Material Production Methods	33
3.5 SiO _x Anode Material Production Method.....	36
3.6 Pre-Lithiation Methods.....	38
3.7 Silicon-Carbon Anode Material by CVD Method.....	41
4.0 Commercialisation	44
4.1 Customer Market Adoption	44
4.2 4680 LIB Cell to Promote Development of Silicon-Based Anode Material.....	48
4.3 China Silicon-Based Anode Composite Material Enterprises.....	49
References.....	55
Disclaimer	57

Figures

Figure 1: Main types of anode material (carbon and non-carbon).....	17
Figure 2: Characteristic and performance of Si-based materials as anodes.....	17
Figure 3: Energy density comparison of different cathode and anode material systems.....	18
Figure 4: Flowchart illustrating the electrode fabrication process.....	19
Figure 5: Electrode fabrication process by the wet method.....	19
Figure 6: Electrode dry processing methods under development.....	20
Figure 7: Distribution of patents for powder spray and binder fibrillation dry processing methods.....	20
Figure 8: Electrode fabrication process by the dry method.....	21
Figure 9: Diagram showing the challenges of silicon anode materials.....	23
Figure 10: Si/C anode material (illustrative).....	25
Figure 11: SiO _x anode material (illustrative).....	25
Figure 12: Silicon-based anodes have various structures.....	26
Figure 13: Walnut structured silicon-carbon composite.....	27
Figure 14: Double-layered cladding structure.....	28
Figure 15: Triple embedded composite structure.....	28
Figure 16: Triple clad filling structure model.....	29
Figure 17: Silicon carbon coating structure (illustrative).....	31
Figure 18: Commercial Si/C anode material principal processing flowsheet.....	31
Figure 19: Performance of silicon-based anode material with different particle sizes.....	33
Figure 20: Performance of silicon-based anode material with different particle sizes.....	34
Figure 21: Conventional nanosilicon principal processing flowsheet.....	35
Figure 22: Conventional SiO _x principal processing flowsheet.....	36
Figure 23: SiO _x anode material principal processing flowsheet by BTR New Material Group Co., Ltd.....	36
Figure 24: SiO _x anode material processing flowsheet by Shanghai Putailai New Energy Technology Co., Ltd / Jiangxi Zichen Technology Co., Ltd.....	37
Figure 25: Pre-magnesium improves first effect of silica.....	38
Figure 26: Relationship between magnesium silicide and silicon oxide anode gram capacity/first effect ...	38
Figure 27: Pre-lithiation anode material methods.....	39
Figure 28: Principal production flowsheet of pre-lithiated silicon-based anode material.....	40
Figure 29: Charge/discharge profiles of SiO ₂ electrodes (2nm, 10nm & 300nm), before (a, c, e) and after (b, d, f) lithiation.....	40
Figure 30: SiO _x principal processing flowsheet (top) Nano-Si/C principal processing flowsheet (Bottom) ...	41

Tables

Table 1: Battery characteristics using anode made from carbon (C), silicon (Si), and silica (SiO ₂).....	17
Table 2: Comparison between graphite-based anode materials and silicon-based anode material.....	18
Table 3: Comparison of silicon-based anode material product type characteristics.....	24
Table 4: Comparison of silicon-based anode material product performance.....	24
Table 5: Si/C anode material product generational differences.....	24
Table 6: SiO _x anode material product generational differences.....	25
Table 7: Structure classification of silicon-based anode material.....	26
Table 8: Four main silicon-based anode material principal production methods.....	30
Table 9: Comparison of nanosilicon production technology methods.....	34
Table 10: Comparison of pre-lithiation processing methods.....	39
Table 11: Electrochemical performance of battery systems before and after anode material pre-lithiation..	41
Table 12: Performance comparison between CVD Si/C anode material and conventional Si/C material.....	42
Table 13: Consumer electronics companies adopting silicon-based anode material.....	45
Table 14: Lithium-ion battery companies adopting silicon-based anode material.....	45
Table 15: Auto companies adopting silicon-based anode material.....	46
Table 16: EV models with maximum cruising range per charge.....	46
Table 17: Summary of fast charging vehicles.....	47
Table 18: Tesla 4680 cylindrical battery product performance characteristics.....	48
Table 19: 4680 development progress of battery manufacturing companies.....	49
Table 20: Major China company silicon-based anode material annual production.....	50
Table 21: Product performance comparison of various silicon-based anode material companies.....	54
