

SODIUM-ION BATTERY

Market Research Report

Author: Brendan Jephcott

Date: May 2024

Table of Contents

Executive Summary	2
1.0 Introduction.....	22
1.1 Discovery.....	22
1.2 Working Principal.....	23
1.3 Component Materials.....	25
1.4 Product Performance.....	25
1.4.1 Safety Performance.....	26
1.4.2 Rate Performance.....	27
1.4.3 Low Temperature Performance.....	28
1.4.4 Cycle Life Performance.....	29
1.4.5 Energy Density	29
1.5 Comparison to Lead-acid and Lithium-ion Batteries.....	29
1.6 Supportive Government Development Policies.....	31
2.0 Component Materials.....	34
2.1 Cathode Material.....	34
2.1.1 Layered Transition Metal Oxides Cathode Material.....	37
2.1.2 Polyanionic Cathode Material.....	44
2.1.3 Prussian Blue Cathode Material.....	49
2.2 Anode Material.....	58
2.2.1 Hard Carbon.....	62
2.2.2 Soft Carbon.....	73
2.2.3 Graphite.....	74
2.3 Electrolyte Material.....	75
2.4 Current Collector.....	78
3.0 Principal Battery Production Method.....	78
3.1 Cash Cost Analysis.....	80
4.0 Commercialisation	84
4.1 Energy Storage Systems.....	84
4.2 Two-Wheeler Electric Vehicles	88
4.3 Low-Speed Electric Vehicles	90
5.0 Competitive Landscape.....	94
5.1 Sodium-ion Battery Manufacturing Companies	97
5.1.1 Chinese Battery Manufacturers	97
5.1.2 Other Major Battery Manufacturers.....	116
5.2 Cathode Material Companies.....	127
5.3 Anode Material Companies.....	130
5.4 Electrolyte Material Companies	141
5.5 Current Collector Material Companies.....	142

GOLDEN DRAGON CAPITAL

6.0	Market Size.....	144
6.1	Sodium-ion Battery Forecast.....	144
6.2	Sodium Carbonate Demand.....	145
	References.....	149
	Disclaimer.....	152

Figures

Figure 1: Working principal of the 'rocking chair battery' (illustrative)	22
Figure 2: Sodium-ion batteries industry development history	23
Figure 3: High-performance sodium-ion batteries (illustrative).....	23
Figure 4: Working principal of a sodium-ion battery (illustrative).....	24
Figure 5: Safety tests done on 18650 type sodium-ion batteries	26
Figure 6: Safety tests on sodium-ion batteries.....	26
Figure 7: Thermal runaway risk in lithium-ion batteries which also applies to sodium-ion batteries.....	27
Figure 8: Sodium-ion battery discharge curve and corresponding temperature change.....	28
Figure 9: Sodium-ion battery operating temperature (-40°C to 80°C)	28
Figure 10: Sodium-ion batteries are applicable for large-scale energy storage and low-speed electric vehicles.....	30
Figure 11: Number of two-wheeler electric vehicles in China.....	32
Figure 12: Specific capacity and average voltage of different sodium-ion cathode materials.....	35
Figure 13: Summary of synthesis, challenges and solutions for sodium-ion cathode materials.....	37
Figure 14: Comparison of existing sodium-ion cathode materials.....	37
Figure 15: Categories of Na_xMO_2 layered transition metal oxide cathode material	38
Figure 16: Tunnel structure transition metal oxide.....	39
Figure 17: Increased specific capacity of layered metal oxides doped with iron.....	40
Figure 18: Electrochemical summary of layered oxide sodium-ion cathode materials, comparing voltage, capacity and energy density.....	41
Figure 19: Manganese dioxide to prepare sodium manganate reaction process.....	43
Figure 20: Polyanionic crystal structures	45
Figure 21: Polyanionic crystal structure of (a) maricite NaFePO_4 and (b) olivine NaFePO_4	46
Figure 22: Polyanionic crystal structure of NASICON type $\text{Na}_3\text{V}_2(\text{PO}_4)_3$	46
Figure 23: Polymorphism in $\text{Na}_2\text{CoP}_2\text{O}_7$ a) orthorhombic, b) triclinic and c) tetragonal forms.....	47
Figure 24: Schematic representation of the $\text{Na}_3\text{V}_2(\text{PO}_4)_2\text{F}_3$ structure viewed along the y axis.....	47
Figure 25: (a) Schematic diagram of anhydrous cube PBA structure; (b) Schematic diagram of PBA with crystal water cube structure	50
Figure 26: NiFe-PBA material thermogravimetric curve.....	51
Figure 27: Production with few defects and low crystal water using sodium citrate as chelating agent (blue line)	51
Figure 28: Polydopamine (PDA) coated PBAs (NFF) improves electrochemical performance.....	52
Figure 29: Electrochemical performance of PBAs is optimal when the ratio of doped nickel and cobalt is 2:3.....	52
Figure 30: Increase in cycle times after $\text{Na}_2\text{NiFe}(\text{CN})_6$, $\text{Na}_2\text{MnFe}(\text{CN})_6$ doped elements	52
